SECTION 1 IDENTIFICATION OF THE SUBSTANCE / MIXTURE AND OF THE COMPANY / UNDERTAKING

Product name	
Floduct name	Transan
Synonyms	detergent cleaner, sanitiser
Other means	
of identification	Not Available
Relevant identified uses of th	he substance or mixture and uses advised against
Relevant identified uses	Detergent cleaner / sanitiser.
Details of the supplier of the	safety data sheet
Registered company name	Auto Klene Solutions
Address	1/83 Merrindale Drive VIC Croydon 3136 Australia
Telephone	+61 3 8761 1900
Fax	+61 3 8761 1955
Website	https://www.autoklene.com/msds/
Email	Not Available

SECTION 2 HAZARDS IDENTIFICATION

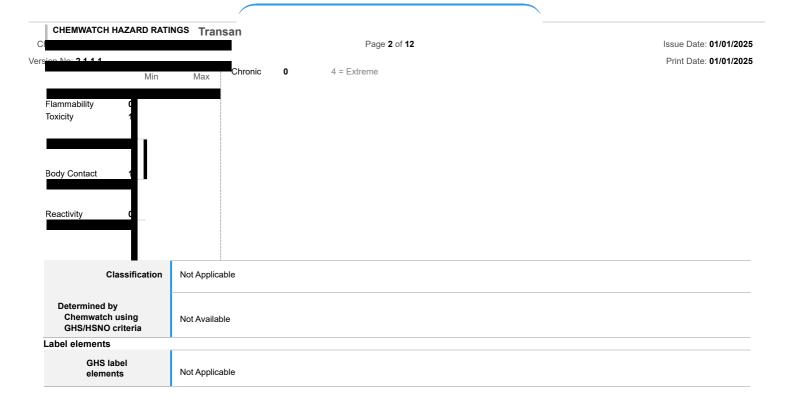

Classification of the substance or mixture

Not considered a Hazardous Substance according to the criteria of the New Zealand Hazardous Substances New Organisms legislation. Not regulated for transport of Dangerous Goods.

Association / Organisation	Not Available
Emergency telephone numbers	131 126 (Poisons Information Centre)
Other emergency telephone numbers	0800 764 766 (New Zealand Poisons Information Centre)

^{0 =} Minimum 1 = Low

2 = Moderate 3 = High

SECTION 3 COMPOSITION / INFORMATION ON INGREDIENTS

Substances

See section below for composition of Mixtures

Mixtures

	THAT WE WANTED		
CAS No	%[weight]	Name	
Not Available	10-30	nonionic surfactants, sequestrants and colouring agents, proprietary	
Not Available	0-5	quaternary compound, proprietary	
7732-18-5	balance	<u>water</u>	

SECTION 4 FIRST AID MEASURES

NZ Poisons Centre 0800 POISON (0800 764 766) | NZ Emergency Services: 111

Description of first aid measures

If this product comes in contact with the eyes:

Eye Contact

▶ Wash out immediately with fresh running water.

▶ Ensure complete irrigation of the eye by keeping eyelids apart and away from eye and moving the eyelids by occasionally lifting the upper and

lower lids. • Seek medical attention without delay; if pain persists or recurs seek medical attention.

Ob	Transan	L D. I 04/04/00
Chemwatch: 5199-69	Page 3 of 12	Issue Date: 01/01/20
ersion No: 2.1.1.1	▶ Removal of contact lenses after an eye injury should only be undertaken by skilled personnel.	Print Date: 01/01/20
Skin Contact	If skin contact occurs: ► Immediately remove all contaminated clothing, including footwear. ► Flush skin and hair with running water (and soap if available). ► Seek medical attention in event of irritation.	
Inhalation	▶ If fumes, aerosols or combustion products are inhaled remove from contaminated area. ▶ Other measures are usually unnecessary.	
Ingestion	 ▶ If swallowed do NOT induce vomiting. ▶ If vomiting occurs, lean patient forward or place on left side (head-down position, if possible) to mail ▶ Observe the patient carefully. ▶ Never give liquid to a person showing signs of being sleepy or with reduced awareness; i.e. I unconscious. ▶ Give water to rinse out mouth, then provide liquid slowly and as much as cast comfortably drink. ▶ Seek medical advice. 	becoming

SECTION 5 FIREFIGHTING MEASURES

Extinguishing media

symptomatically.

The product contains a substantial proportion of water, therefore there are no restrictions on the type of extinguishing media which may be used. Choice of extinguishing media should take into account surrounding areas.

Though the material is non-combustible, evaporation of water from the mixture, caused by the heat of nearby fire, may produce floating layers of

combustible substances. In such an event consider: foam. dry chemical powder. • carbon dioxide. **Special hazards arising from the substrate** or mixture

or mixture	
Fire Incompatibility	None known.
Advice for firefighters	
Fire Fighting	 ▶ Alert Fire Brigade and tell them location and nature of hazard. ▶ Wear breathing apparatus plus protective gloves in the event of a fire. ▶ Prevent, by any means available, spillage from entering drains or water courses. ▶ Use fire fighting procedures suitable for surrounding area. ▶ DO NOT approach containers suspected to be hot. ▶ Cool fire exposed containers with water spray from a protected location. If safe to do so, remove containers from path of fire.
Fire/Explosion Hazard	 ▶ The material is not readily combustible under normal conditions. ▶ However, it will break down under fire conditions and the organic component may burn. ▶ Not considered to be a significant fire risk. ▶ Heat may cause expansion or decomposition with violent rupture of containers. ▶ Decomposes on heating and may produce toxic fumes of carbon monoxide (CO). ▶ May emit acrid smoke. Decomposes on heating and produces toxic fumes of:, carbon dioxide (CO2), other pyrolysis products typical of burning organic material
SECTION 6 ACCIDENTAL	Decomposes on heating and produces toxic fumes of:, carbon dioxide (CO2), other pyrolysis products typical of burning organic material

Chemwatch: 5199-69 Page 4 of 12 Issue Date: 01/01/2025 Version No. 2.1.1.1 Print Date: 01/01/2025

Personal precautions, protective equipment and emergency procedures

▶ Clean up all spills immediately.

▶ Avoid breathing vapours and contact with skin and eyes.

Contain and absorb spill with sand, earth, inert material or vermiculite.

▶ Control personal contact with the substance, by using protective equipment. ▶

Wipe up.

▶ Place in a suitable, labelled container for waste disposal.

Moderate hazard.

▶ Clear area of personnel and move upwind.

▶ Alert Fire Brigade and tell them location and nature of hazard.

Major Spills

Minor Spills

▶ Wear breathing apparatus plus protective gloves.

▶ Prevent, by any means available, spillage from entering drains or water course.

▶ Stop leak if safe to do so.

Contain spill with sand, earth or vermiculite.

Personal Protective Equipment advice is contained in Section 8 of the SDS.

SECTION 7 HANDLING AND STORAGE

Precautions for safe handling

▶ Wear protective clothing when risk of exposure occurs.

▶ Avoid all personal contact, including inhalation.

▶ Use in a well-ventilated area

Safe handling

▶ Prevent concentration in hollows and sumps.

▶ DO NOT enter confined spaces until atmosphere has been checked.

▶ DO NOT allow material to contact humans, exposed food or food utensils.

▶ Avoid contact with incompatible materials.

▶ DO NOT allow clothing wet with material to stay in contact with skin

Store in original containers.

▶ Keep containers securely sealed.

Other information

▶ Store in a cool, drv. well-ventilated area.

▶ Store away from incompatible materials and foodstuff containers.

▶ Protect containers against physical damage and check regularly for leaks.

Observe manufacturer's storage and handling recommendations contained within this SDS.

Conditions for safe storage, including any incompatibilities

Suitable container

▶ Polyethylene or polypropylene container.

▶ Packing as recommended by manufacturer.

▶ Check all containers are clearly labelled and free from leaks.

Storage incompatibility

Exposure controls

proprietary

water

quaternary compound.

Engineering controls are used to remove a hazard or place a barrier between the worker and the hazard. Well-designed engineering controls can be highly effective in protecting workers and will typically be independent of worker interactions to provide this high level of protection. The basic types of engineering controls are:

Not Available

Not Available

Appropriate engineering controls

Process controls which involve changing the way a job activity or process is done to reduce the risk.

Enclosure and/or isolation of emission source which keeps a selected hazard "physically" away from the worker and ventilation that strategically "adds" and "removes" air in the work environment. Ventilation can remove or dilute an air contaminant if designed properly. The design of a ventilation system must match the particular process and chemical or contaminant in use.

Employers may need to use multiple types of controls to prevent employee overexposure.

Personal protection

Not Available

Not Available

- ▶ Safety glasses with side shields.
- ▶ Chemical goggles

Eye and face protection

▶ Contact lenses may pose a special hazard; soft contact lenses may absorb and concentrate irritants. A written policy document, describing the wearing of lenses or restrictions on use, should be created for each workplace or task. This should include a review of lens absorption and adsorption for the class of chemicals in use and an account of injury experience. Medical and first-aid personnel should be trained in their removal and suitable equipment should be readily available. In the event of chemical exposure, begin eye irrigation immediately and remove contact lens as soon as practicable.

Skin protection

See Hand protection below

- ▶ Wear chemical protective gloves, e.g. PVC
- ▶ Wear safety footwear or safety gumboots, e.g. Rubber

The selection of suitable gloves does not only depend on the material, but also on further marks of quality which vary from manufacturer to manufacturer. Where the chemical is a preparation of several substances, the resistance of the glove material can not be calculated in advance and has therefore to be checked prior to the application.

The exact break through time for substances has to be obtained from the manufacturer of the protective gloves and has to be observed when making a final choice.

Suitability and durability of glove type is dependent on usage. Important factors in the selection of gloves include:

Hands/feet protection

- ▶ frequency and duration of contact, ▶ chemical resistance of glove material,
- ▶ glove thickness and ▶

dexterity

Select gloves tested to a relevant standard (e.g. Europe EN 374, US F739, AS/NZS 2161.1 or national equivalent).

- ▶ When prolonged or frequently repeated contact may occur, a glove with a protection class of 5 or higher (breakthrough time greater than 240 minutes according to EN 374, AS/NZS 2161.10.1 or national equivalent) is recommended.
- ▶When only brief contact is expected, a glove with a protection class of 3 or higher (breakthrough time greater than 60 minutes according to EN 374, AS/NZS 2161.10.1 or national equivalent) is recommended.

Body protection

See Other protection below

▶ Overalls

▶ P.V.C. apron.

Other protection

- ▶ Barrier cream.
- ▶ Skin cleansing cream.
- ▶ Eye wash unit.

GLOVE SELECTION INDEX

Glove selection is based on a modified presentation of the:

"Forsberg Clothing Performance Index".

The effect(s) of the following substance(s) are taken into account in the <code>computer-generated</code> selection:

Auto Klene Multi Mix 2

Material	СРІ
BUTYL	А
NEOPRENE	А
VITON	А
NATURAL RUBBER	С
PVA	С

^{*} CPI - Chemwatch Performance Index

NOTE: As a series of factors will influence the actual performance of the glove, a final selection must be based on detailed observation. -

SECTION 9 PHYSICAL AND CHEMICAL PROPERTIES

Information on basic physica	formation on basic physical and chemical properties				
Appearance	Light pink coloured semi-viscous liquid with neutral detergent - like odour; mixes with water.				
Physical state	Liquid	Relative density (Water = 1)	1.01		
Odour	Not Available	Partition coefficient noctanol / water	Not Available		
Odour threshold	Not Available	Auto-ignition temperature (°C)	Not Applicable		
pH (as supplied)	10.0-10.8	Decomposition temperature	Not Available		
Melting point / freezing point (°C)	Not Available	Viscosity (cSt)	Not Available		
Initial boiling point and boiling range (°C)	~100	Molecular weight (g/mol)	Not Applicable		
Flash point (°C)	Not Applicable	Taste	Not Available		
Evaporation rate	Not Available	Explosive properties	Not Available		
Flammability	Not Applicable	Oxidising properties	Not Available		
Upper Explosive Limit (%)	Not Applicable	Surface Tension (dyn/cm or mN/m)	Not Available		
Lower Explosive Limit (%)	Not Applicable	Volatile Component (%vol)	Not Available		
Vapour pressure (kPa)	Not Available	Gas group	Not Available		

A: Best Selection

B: Satisfactory; may degrade after 4 hours continuous immersion

C: Poor to Dangerous Choice for other than short term immersion

^{*} Where the glove is to be used on a short term, casual or infrequent basis, factors such as "feel" or convenience (e.g. disposability), may dictate a choice of gloves which might otherwise beunsuitable following long-term or frequent use. A qualified practitioner should be consulted.

SECTION 13 DISPOSAL CONSIDERATIONS

Waste treatment methods

▶ Recycle wherever possible or consult manufacturer for recycling options.

Product / Packaging disposal

▶ Consult State Land Waste Management Authority for disposal.

▶ Bury residue in an authorised landfill.

▶ Recycle containers if possible, or dispose of in an authorised landfill

Ensure that the disposal of material is carried out in accordance with Hazardous Substances (Disposal) Regulations 2001.

SECTION 16 OTHER INFORMATION

Page **11** of **12**

Other information

Classification of the preparation and its individual components has drawn on official and authoritative sources as well as independent review by the Chemwatch Classification committee using available literature references.

A list of reference resources used to assist the committee may be found at: $\underline{www.chemwatch.net}$

The SDS is a Hazard Communication tool and should be used to assist in the Risk Assessment. Many factors determine whether the reported Hazards are Risks in the workplace or other settings. Risks may be determined by reference to Exposures Scenarios. Scale of use, frequency of use and current or available engineering controls must be considered.
